PROFILE SUMMARY

Software developer with hands-on experience building production REST APIs, data pipelines, and integrations using Java, Spring Boot, React, and MySQL. Built a full-stack CRM for a real client (Eva Groups), including Excel-based data ingestion, JWT auth, and WebSocket-based real-time sync. Strong foundation in OOP, data structures, and debugging integration and reliability issues under mentorship.

SKILLS

- Languages: Java (Proficient), Python (Intermediate), JavaScript (Intermediate)
- Frameworks: Spring Boot, React, Flask, FastAPI, REST APIs
- Databases: MySQL, PostgreSQL, H2 Database
- DevOps & Tools: Git, GitHub, CI/CD, Docker, AWS, JWT, Apache POI, WebSockets
- Practices: Design Patterns (MVC), Data Modeling, Security Best Practices, Code Review, Debugging

EXPERIENCE

Java Development Intern — Labmentix (Remote)

June 2026 – Present

- Contributing to REST API development and debugging within a Java/Spring Boot backend, focusing on clean implementation, testing, and code quality under mentorship.
- Built REST APIs for CloudDrive, a cloud file storage app (like Google Drive), using Java and Spring Boot — including login/auth, file upload/download, and file sharing with permissions.
- Improved code quality and reliability across CloudDrive and SmartERP, measured by a reduction in recurring bugs flagged during mentor code reviews, by debugging integration issues and refactoring backend logic for maintainability.
- Contributed to SmartERP's business-management backend, measured by feature completeness against a TallyPrime-style functional spec, by building Spring Boot services and React components against a shared PostgreSQL schema.

PROJECTS

EVA CRM System ([Live](#)) | React.js, Java, Spring Boot, MySQL, REST APIs, JWT, Apache POI, WebSockets

- Built REST APIs in Spring Boot for authentication, customer management, collection tracking, and reporting for a live client (Eva Groups).
- Implemented Excel data ingestion using Apache POI to parse and import daily customer records into MySQL — hands-on experience with data extraction and ingestion pipelines.
- Built JWT-based role-based access control so admins and executives access only authorized data and features.
- Added offline data handling and synchronization for mobile users, plus WebSocket-based real-time updates.

Visual Pipeline Engine ([GitHub](#)) | React, Redux Toolkit, Node.js/Express.js, MongoDB, REST APIs, Docker

- Built a full-stack drag-and-drop workflow engine with a Node.js/Express REST API backend and MongoDB for pipeline persistence.
- Implemented DAG validation, node-based workflow design, and API-driven execution simulation; Dockerized for deployment with GitHub Actions CI/CD.

Bedside Bot ([GitHub](#)) | Python, Flask, OpenCV, Mediapipe, DeepFace

- Built an AI-powered hospital assistant for bedridden patients using gesture recognition, emotion detection, and voice commands.
- Implemented real-time hand gesture recognition with 94% accuracy using Mediapipe and OpenCV; integrated DeepFace and SpeechRecognition into a unified Flask web application.

EDUCATION

MIT Art, Design & Technology University — B.Tech, Computer Science

Aug 2022 – June 2026

- CGPA: 7.58 | Relevant Coursework: Data Structures, Object Oriented Programming, Database Management Systems

S.H. Junior College Khamla, Nagpur — HSC (Science)

June 2020 – May 2021

- Percentage: 75%

ACHIEVEMENTS

- Smart India Hackathon 2024: Selected among Top 50 out of 564 entries at MITADT University.
- IGNITE-2026 Research Paper Acceptance (Paper ID: 896): Research paper on an AI-powered healthcare assistant system accepted for Oral Presentation at the IGNITE-2026 International Conference.

CERTIFICATIONS

- Java, Python and JavaScript — Spoken Tutorial Project, IIT Bombay, Computer Networking — Cisco Networking Academy
